Risk Profile of the Scheme	<ul style="list-style-type: none"> Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal. As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down. The value of investments may be affected, inter-alia, by changes in the market, interest rates, changes in credit rating, trading volumes, settlement periods and transfer procedures; the NAV is also exposed to Price/Interest-Rate Risk and Credit Risk and may be affected inter-alia, by government policy, volatility and liquidity in the money markets and pressure on the exchange rate of the rupee Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the scheme. Kotak Asset Allocator is only the name of the scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns. The sponsor is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs.2,50,000 made by it towards setting up the Fund. The present scheme is not a guaranteed or assured return scheme. <p>Key Scheme specific Risks</p> <ol style="list-style-type: none"> The investors of the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of the underlying schemes. Hence the investor under the Scheme may receive lower pre-tax returns than what they may receive if they had invested directly in the underlying schemes in the same proportions. The Portfolio disclosure of the Scheme will be limited to providing the particulars of the underlying schemes where the Scheme has invested and will not include the investments made by the underlying schemes. <ol style="list-style-type: none"> The Portfolio rebalancing may result in higher transaction costs. Since the Scheme proposes to invest in underlying schemes, the significant underperformance in even one of the underlying schemes may adversely affect the performance of the Scheme. The Scheme proposes to invest in specified open-ended mutual fund schemes of Kotak Mahindra Mutual Fund. Hence the Scheme's performance will depend upon the performance of the underlying schemes. Any change in the investment policies or the fundamental attributes of the underlying schemes may affect the performance of the Scheme. Investments in underlying schemes will have all the risks associated with such schemes including performance of underlying stocks, derivative investments, off shore investments, stock lending, changes in credit rating, trading volumes, settlement periods, price/interest rate risk, volatility & liquidity in money markets, basis risk, spread risk, re-investment risk, etc. The Scheme's performance may be impacted by exit loads or other redemption charges that may be charged at the time of redemption from the Underlying Schemes. Since the incidence of exit loads on investments made by the Scheme in Underlying Schemes of the Fund is based on first-in, first-out principle, it is anticipated that the impact of such exit loads/redemption charges could be minimal during the normal course of functioning of the Scheme. There would be an impact on underlying schemes on account of portfolio rebalancing i.e. change in allocation to equity & debt schemes. Such redemptions can be high at times being more than 5% of the underlying equity scheme(s). However, due to portfolio rebalancing, should the redemptions in Underlying scheme(s) exceed 5% of the net asset of each Underlying scheme, then the Investment Manager will stagger redemptions over few days, so that redemptions in any Underlying scheme(s) do not constitute more than 5% of the net asset of the Underlying scheme(s)' on any given business day. The investors should refer to the Scheme Information Documents and the related addenda for the scheme specific risk factors and special consideration of the respective Underlying Schemes.
