About Kotak Bond Short Term Fund

- The investment objective of Kotak Bond Short Term Fund is to provide reasonable returns and high level of liquidity by investing in debt and money market instruments of different maturities so as to spread the risk across different kind of issuers in the debt market.
- The scheme is suitable for investors who may generally want to position themselves at the shorter end of the yield curve with a time horizon of 6 months and more.

Debt Market Outlook

- One of the biggest fallouts of the Covid crisis was seen in April with oil prices (WTI Crude) going into negative territory as inventory buildup, due to lack of demand, created a storage problem in the oil markets.
- The lock down in India has been extended for the second time in India till the 17th of May, however several concessions were provided based on the classification of the entire country into Green, Orange and Red zones, depending on the number of cases in each region.
- In the mutual fund space, Franklin Templeton wound up 6 of their debt schemes with over 30000 Crs of AUM as of 31st Mar 2020, citing inability to meet redemptions due to market liquidity conditions as a result of the Covid-19 crisis.
- Earlier during the month RBI has announced several measures including a cut of reverse repo rate by 25 bps to 3.75 percent, LTRO 2 of 50000 cr that could be lent to NBFC's and MFI's
- The current Gsec yield curve is quite steep. However we do expect further RBI action to introduce some amount of flattening.

Portfolio Action

- As on Mar 2020 end, the portfolio duration stood at 2.38; we have maintained duration of the fund in the middle of the matrix.
- Currently, ~44% of the portfolio has a residual maturity of less than 2 years. Of the balance, ~33% is invested in corporate bonds and ~23% is invested majorly in central and state government securities.
- 100% of the portfolio is invested in government securities and in AAA or equivalent rated securities.

Particulars	30 Apr 2020	31 Mar 2020
